

NANODESU Accu-Swing VI

Evolutions add up to more revolutions! Introducing ACCU SWING VI, the latest ball in the ever popular swing series. The progression from ACCU SWING V to VI is most easily traceable in the DMI core. We also added a new weight block to balance out and create a new momentum force on the lanes. Sanded or not, the ACCU SWING VI maintains steady speed and friction for impressive flip in the backend. Now...don't forget the strong arm pin action with long reaching consequences for those poor pins!

PRO-AM Raider

Introducing RAIDER the second series from PRO-AM. Riding high on the success of the INVADER MULTI and BLACK INVADER the performance the RAIDER is sure to exceed your expectations. We took the trace DNA from the original BLACK INVADER cover stock MO5.5P as a base and refined the control factor with more grip and hook potential. The CONTROL 6.0P cover stock paired with the innovative TORO 2.25 core make for good revs in medium conditions. As for the backend, you will see a seamless transition from a smooth roll to a strong arc with superior pin action.

Release Date

VENOM TOXIN

The Venom Toxin™ displays bright colors as a warning - This hybrid is deadly! On light to medium oil, it is clean down the lane with a smooth, but angular backend that strikes with destructive force. At the heart of the Venom Toxin is the proven Gear™ core. It produces a low RG for easy revs and a low differential to tame track flare and retain striking power. The cover on the Venom Toxin is a new twist on Atomix technology called Hybrid Radial Reactive, aka Atomix HR. It skids cleanly down the lane, then attacks on the backend with devastating power.
