

COMMANDER BETA

Riding high on the success of the Commander Alpha which sold out the day it was released, Commander Beta is sure to fly off the shelves! When creating this new ball we started out by adding some pearl in the mix and produced the original Select Premium Pearl Reactive coverstock. Bowlers will find the same level of friction in oil as we saw in the Commander Alpha but with a real kick in the backend! The kick then turns into low sweeping pin-action, leaving the deck clear. Order yours today before they are gone.

ABSOLUTION DYNAMITE

Ah..... the smell of fresh DYNAMITE!!ABSolution Dynamite mixes special Micro Powder to the proven ALL MIGHTY REACTIVE coverstock and cranks up the absorption in oil slicks down the lane. This ball matches explosive force with marked stability for a controlled disaster. Paired with our impact absorbing Ceramic Core the pin action is deliberate and decapitating ...

TOUR X

When bowling on tougher oil patterns, bowlers tend to lean towards a bowling ball that uses a symmetrical core design. The reason for this is symmetrical cores allow the bowler's release to have more influence on reaction of the ball. That's why we are combining our most successful symmetric core in recent years, the DNA core, with our Luxury DR-4 Pearl cover. When the lanes get tough, smart bowlers get Tour X!
