

**NANO-DESU**

Accu-Swing V

Check out the newest release in the ACCU SWING series the ACCU SWING 5, featuring the DMI 2 disc core (new generation precision core). The DMI core is comprised of a uniquely designed pair of cylindrical sheets stacked together, that allow for increased flip when paired with the NANOXY Hybrid Pearl coverstock with Fullerene C60. This is the perfect match to complete and maximize in the backend flip after ripping through the dry zone. Topped off with a softer inner shell, this ball has double the power to absorb the shock to increase force and potential pin action.

●RG : 2.460 ●ΔRG : 0.0523

●Coverstock : NANOXY Hybrid Pearl with Fullerene C60

●Core : DMI2disc core with magnet

●Hardness : 74~76° ●Weights : 11~16lbs

●Finish : 500, 600, 3000, Factory POLISH
