

NANO-DEFSU

Accu-Swing VI

Evolutions add up to more revolutions! Introducing ACCU SWING VI, the latest ball in the ever popular swing series.

The progression from ACCU SWING V to VI is most easily traceable in the DMI core. We also added a new weight block to balance out and create a new momentum force on the lanes.

Sanded or not, the ACCU SWING VI maintains steady speed and friction for impressive flip in the backend.

Now...don't forget the strong arm pin action with long reaching consequences for those poor pins!

- RG : 2.508 ●ΔRG : 0.051
- Coverstock :
Nanoxo Special Pearl With Fulleren C60
- Core :
DMI 2 disc Double Weight Block Core with magnet
- Hardness : 74~76°
